

Every screen in Taskey, and what it is for.

A guide to the system Pharmers runs its projects on: what happens when a client pays, who each step belongs to, what Taskey emails out on its own, and where to look when you want to know whether today needs you.

10

steps, the same ones on
the wall chart

5

seats, one per person in
the practice

8

emails Taskey writes and
sends itself

0

status updates anybody
has to ask for

Prepared by Monkey Web, September 2026. Every screen in this document is a photograph of the working system. The clients, the staff names and the money in them are invented for the demonstration, so nothing here is a real client's business.

What is in here

Read section 1 and the section for your own job. The rest is here for when you need it.

1 What Taskey is

The five rules the whole system follows, and the ten steps

2 Getting in

No password to remember, and what happens without a seat

3 Your dashboard

What management sees, and what everybody else sees

4 Tasks

The one list, and the three places work on it comes from

5 Projects

A payment, a dated sheet, and the six steps it carries

6 The emails Taskey sends

Every letter, exactly as the client or the team receives it

7 The team

Seats, invitations, job descriptions and standing duties

8 The numbers

Management only, and measured against dates we set ourselves

9 Your own account

What is yours to change and what is management's

10 What each person does here

One paragraph per seat

11 Before the practice runs on it

The short list still outstanding

What Taskey is

A project sheet that opens itself the day a client pays, dates every step from that payment, and then chases the people and the clients holding it up without anybody asking for a status update.

The practice already has a workflow. It is on the chart on the wall: ten steps from the first enquiry to the balance being collected. What it did not have was anything that keeps time. A project could sit for two weeks waiting on a lease agreement and the only way to find that out was to ask somebody.

Taskey is that timekeeper. It knows the day the money came in, it knows the window each service promises, and from those two facts it works out every date on the project by itself. From then on the sheet is the one telling you what is late, rather than you telling the sheet.

1 A project exists because a client paid.

There is no other way to open one. The office loads the payment and the sheet builds itself: the steps, their dates, the document request list and whoever each step belongs to.

2 Every date is counted from the payment date.

Not from the day somebody got round to opening the file. A new premises licence is up to 14 days to submit, so the sheet promises 14 days from the payment and lays its steps out inside that.

3 Steps belong to jobs, not to names.

Step 8 belongs to the owner, step 9 to the coordinator. When a step comes up it lands on whoever holds that job, so nothing has to be reassigned when somebody is away or somebody new starts.

4 Nothing is submitted before Patricia signs it off.

Step 8 is a hard stop. The consultant hands the pack up, it appears on Patricia's dashboard and in her email, and until she approves it the submission step does not open.

5 Taskey does the writing.

The document request, the chasing, the balance email, the QC notices, the morning list: the system writes and sends them. Client letters go out as Pharmers, and replies land with the consultant carrying that project.

The ten steps

The numbers are the practice's own. Steps 1 to 4 happen before there is a project: they are the sales side. Step 5 is where a sheet begins, which is why a sheet always opens on step 5 and never on step 1.

	STEP	WHOSE	WHAT HAS TO BE TRUE TO CLOSE IT
1	Enquiry received	Sales	Before the project. Handled as a lead.
2	Service request and questionnaire	Sales	Before the project.
3	Consultation	Sales	Before the project.
4	Quote sent and accepted	Sales	Payment against the quote is what opens step 5.
5	Project checklist and info sheet	Administrator	The sheet is open. The client has been acknowledged and knows the guidelines.
6	Collecting client particulars	Consultant	Every requested document is in. This is where most delay sits, so Taskey chases it on its own.
7	Project compilation	Consultant	The pack is compiled and handed up for the QC check.
8	Completion QC	Owner	Patricia has approved it. Sending it back reopens step 7.
9	Project submission	Coordinator	Lodged with the authority, and how it went in is recorded.
10	Balance collection	Administrator	The balance is paid. It falls due the day we submit.

THE ONE THING TO REMEMBER

A step closes because the work behind it happened, not because somebody ticked a box. Mark the last document received and step 6 closes itself. Approve the QC and step 8 closes itself. That is why the dates on the sheet can be trusted.

What Taskey does not do

It does not do the work, and it does not talk to the authorities. It does not decide prices. It does not replace the phone call to a client who has gone quiet: it tells you the client has gone quiet, and how long for.

Getting in

Taskey is at taskey.tech. There is no password to remember: it emails you a code, or you use your Google account.

FIGURE 1 Signing in. Enter your work address and Taskey emails you a code. The first time you sign in, your seat attaches itself to that address.

Taskey is by invitation. Patricia adds a person under Employees, which creates their seat and emails them a link. Signing in with an address that has no seat gets you nothing at all, which is deliberate: a stranger with a Google account cannot see a single client of yours.

FIGURE 2 What a signed-in address without a seat sees. No client, no project, no name from the practice.

NOTE FOR HANDOVER

The sign-in box still says *Development mode*, which is the login service's own label while it is set up for testing. It gets switched to the live setting before the practice starts using Taskey for real work, and the badge goes away.

Your dashboard

The first screen after signing in. There are two of them, and which one you get depends on your job: management sees the practice, everybody else sees their own day.

What management sees

Top left is the number of open sheets, and under it whether any of them are past the date the client was promised. Then what is submitting inside a week, how many clients are sitting on documents, and what money is outstanding on work already submitted.

FIGURE 3 The management dashboard. Everything on it is live: nobody compiles this, and nobody can massage it.

Needs a person is the part that matters. It is everything the practice is behind on, worst first, and it is written in plain words: a client sitting on documents, a QC check waiting, an authority query that came back, a submission date that has gone past. Each card opens the sheet or the task behind it.

Submitting next is every open sheet in date order, with one line saying what each is waiting on. **The team right now** puts whoever is furthest behind at

the top, with how much is open and how much of it is late. **Where the sheets are sitting** shows the pipeline: how many projects are on each step. **Just happened** is the record of what was actually done, newest first, and nothing in it can be edited by anybody.

What everybody else sees

The same screen, asking a different question: what should I do next. Due today, what has gone past its date, everything open, and how much of your work has closed on time. Under that, your list in the order it should be worked, whatever is quietly slipping, the projects you carry, and your own eight week record.

FIGURE 4 The consultant's dashboard. The chart at the bottom is the same one management sees on his page, deliberately, so a review is never a surprise.

On a phone

Taskey is a website, not an app to install. Open taskey.tech in the phone's browser, sign in once, and it stays signed in. The navigation moves to a row of buttons across the top and the cards stack.

Nothing to refresh

Everything on these screens is worked out from the sheets and the tasks at the moment you open them. There is no report to run and no figure that is a day old.

FIGURE 5 The same dashboard on a phone. Every screen works on one.

Tasks

One list per person, grouped by the day work is due. Management sees the whole team's list on the same screen.

FIGURE 6 The task list, management's view. Grouped by day, with anything urgent tinted, and each person's initials on the right.

Work on this list comes from three places

1. **A project step.** When a sheet reaches step 6, the task *Collecting client particulars* appears on the list of whoever holds that job, with the sheet's own date on it. Close the step and the task closes with it.
2. **A standing duty.** Work nobody should have to hand out: chasing documents every working morning, checking the portals, reconciling payments. Taskey puts these on the list every day they fall on.
3. **Somebody handing it out.** Patricia or the office types it in and picks who it goes to. That person gets an email the moment it is created.

FIGURE 7 A task opened. What it belongs to, when it is due, how late it is, who it is sitting with, and who set it. **Mark done** closes it; **Send a reminder** emails the person holding it.

FIGURE 8 Handing work out. Pick the kind of work, the date, the urgency and the people. The line above the button says exactly what will happen before you press it.

WHO CAN HAND WORK OUT

Management. Everybody else works their own list. A task can go to more than one person at once, and then it is one thing to chase, not three.

Projects

One sheet per paid project. The list is ordered by what is closest to breaking a promise, not by what was opened last.

FIGURE 9 Every open sheet, with the step it is on and whose it is. Anything past its submission date is tinted red. The tabs above filter to what is waiting on clients, what is at the authority, and what is finished.

A payment opens a sheet

This is the only way a project starts. The office picks the service, types the client and their contact details, the date the money landed and what was paid. Everything else is worked out.

FIGURE 10 Loading a payment. Before you press the button it tells you the submission date it is about to promise, what will be outstanding, and who gets the first step.

Note the line under the service buttons: *up to 14 days to submit, then about 90 days processing*. Those durations come from the practice's own brochure, one set per service, and they are what the dates are built from. Phased services split the fee into equal parts, and each phase has its own submission and its own balance.

The sheet itself

The top of a sheet is the only thing most people need: the next step, who it is with, and the one button that moves it. Everything else is behind the four tabs, so the screen does not become a form to read.

FIGURE 11 Step 6, waiting on the client. Six documents outstanding, chased once already. **Chase again** sends the client another letter and records that it went.

FIGURE 12 The Documents tab. The request list for this service, ticked off as things arrive. When the last one is ticked, step 6 closes itself and step 7 opens with the consultant.

A finished project is better left complete than deleted. This is for a sheet opened by mistake. Delete this project

FIGURE 16 A finished project. Approved, balance settled, every step closed. It stays on the Complete tab rather than being deleted.

DELETING

Management can delete a sheet, for one opened by mistake. It says what will go and what will be kept, warns if money has been received against it, and makes you type the client's name first. The record of what was done and what was emailed is kept either way.

The emails Taskey sends

Patricia decides what goes out. Taskey is what actually sends it, so no letter waits on somebody finding the time to write it.

Client letters go out as **Pharmers (via Taskey)** and a reply lands with the consultant carrying that project. Letters to the team come from **Taskey**, because it is the system talking, not a colleague. Every email is recorded against the project, including the ones that fail, so "did the client ever get that" has an answer.

WHEN	WHO GETS IT	WHAT IT SAYS
A sheet opens	The client	Thank you for the payment, here is the date we are aiming at, here is everything we need from you.
Documents still out	The client	What is still missing, and the date it is putting at risk. Sent again on its own while items stay outstanding.
A pack is handed up	Patricia	A QC check is waiting, and nothing submits until it is signed off.
QC sends it back	The consultant	What is wrong, in Patricia's words, and the step is open again.
It is submitted	The client	Lodged on this date, the balance is now due, invoice attached.
Work is handed out	The person	What it is, when it is due, and who asked for it.
Somebody chases	The person	A reminder about a task that is overdue.
07:00 every working day	Everybody	One email each: what of theirs is late or due today. Nothing to open Taskey for if the list is empty.

What the client actually receives

FIGURE 17 The request that goes out when a sheet opens.

FIGURE 18 The chase, sent on its own when items stay outstanding.

FIGURE 19 Submitted, and the balance is due the same day.

FIGURE 21 To the consultant, when a pack goes back.

FIGURE 23 A reminder, sent when somebody presses the button on a task.

FIGURE 20 To Patricia: a QC check is waiting on her.

FIGURE 22 Work handed out reaches the person by email too.

FIGURE 24 The 07:00 list, one per person, only when there is something on it.

WHERE THESE COME FROM

These are the real letters, not mock-ups: they were produced by the same code that sends them, and captured on their way out. Wording can be changed at any time, and it is worth doing once you have watched a few go out.

The team

Management only. Who has a seat, what each person is responsible for, and how they are actually doing.

FIGURE 25 The team. On the right of each row, how much of their work has closed on time. Underneath, the standing duties nobody has to hand out.

FIGURE 26 Adding somebody. The job you pick is what decides which project steps reach them, and adding them emails them an invitation.

One person's page

This is the page a review is held on. It is the same measure the person sees on their own dashboard, so there is nothing here they have not already seen.

FIGURE 27 How much closed on time, what is open now, how late they run when they run late, and how their submissions went in.

FIGURE 28 Eight weeks of closed work, on time in indigo and late in red, and what kind of work they close.

FIGURE 29 Under the numbers: their live list, and every sheet they carry. A sheet has to be handed to somebody else before a person can be deleted.

Their settings

Job description and standing duties live here, and they are management's to set. Nobody can give themselves a duty or rewrite their own job description, which is the point of having one.

FIGURE 30 The job, the job description, their standing duties, the invitation, and at the foot of it removing or deleting the person.

Removing somebody, and deleting them

Removing takes them off every live list and keeps everything they did: their closed work, their signatures and the record stay exactly where they are. This is what you want when somebody leaves.

Deleting wipes the person. It refuses while they still carry a project, it will not let the last owner delete themselves, and it makes you type their name. The record of what was done stays, because that is what the practice is held to.

The numbers

Management only. Every measure is against a date the practice set itself, so none of it needs anybody to report on anything.

FIGURE 31 The whole practice, measured. Nothing on this screen is typed in by hand.

MEASURE	WHAT IT MEANS
Tasks closed on time	Of everything the team has closed, how much closed on or before the day it was due.
Submitted on time	Of everything lodged, how much went in inside the window the client was promised.
Payment to submission	How many days the practice actually takes from the money landing to lodging, against how many the service allows.
QC passed first time	How many packs Patricia signed off without ever sending them back. The count beside it is how many were sent back.
Tasks closed by week	Eight or twelve weeks of work. The red on top of each bar is what closed after its date.
Submissions by month	The same idea for projects: inside the promised window, or over it.
Closed on time, by person	Per person, with how much of it was late. Anybody under 70 percent shows red.
The money	Received against billed across every sheet, and what is owed on work already submitted.

ON READING THESE FAIRLY

A late task is not automatically somebody's fault: a consultant waiting on a client's lease agreement can miss a date honestly. The numbers show you where to look, and the sheet behind them says what was actually happening.

Your own account

Reached from your name at the bottom of the left rail. Most of it is read-only, on purpose.

FIGURE 32 Your account. Your job, your job description and your standing duties are shown here but set by management. What is yours is how you get in.

The second tab, **Sign-in and security**, is yours alone: add a passkey so you do not need a code, connect or disconnect your Google account, see the devices you are signed in on, and sign out everywhere at once. Taskey keeps no password of its own, so there is none to change and none to leak.

Management's version of this screen shows the practice instead: whether anything is sitting on Patricia's signature, how many people are on the team, and what is outstanding across submitted work.

What each person does here

Taskey routes work by job. This is what each seat is expected to do in it, and what will arrive on its own.

Patricia Owner and responsible pharmacist	Sign off QC, which is the one point nothing gets past. Watch the dashboard for what the practice is behind on and the numbers for whether it is getting better. Add and remove people, set their job descriptions and their standing duties. Load a payment if the office is not in.
The administrator Practice administrator	Load every payment the day it lands, which is what opens the sheet and starts the clock. Step 5 and step 10 are yours: get the client acknowledged at the start, and collect the balance the day the project is submitted. Reconcile what has come in against what is owed.
The consultant Project consultant	Steps 6 and 7. Get the client's documents in, chasing where Taskey's letters have not worked, then compile the pack and hand it up for QC before the date on the sheet. Anything sent back comes straight back to you with the reason on it.
The coordinator Project coordinator	Step 9, and everything after it. Submit what QC has cleared and record how it went in. Check the portals every morning, log any query that comes back against the project, follow up monthly while it is in processing, and record the outcome the day it arrives.
Sales Sales consultant	Steps 1 to 4, which happen before there is a project. Quote from the brochure, explain the phases, follow up every quote older than three days, and hand a paid client to the office with the scope in writing.

If you only remember one thing

- **Everybody:** open your dashboard in the morning. If it is quiet, you are clear.
- **Everybody:** close work on the day it is due, or say why it slipped when you close it.
- **Patricia:** the QC card on your dashboard is the practice's brake. Nothing goes to an authority around it.

Before the practice runs on it

Taskey is built and working. This is the short list between here and the team using it on live projects.

WHAT	WHY	WHOSE
Clear the demonstration data	The ten clients, the five staff and the ten weeks of work in this document are invented. They get wiped in one go before the real practice is loaded.	Monkay Web
Load the real team	Five real addresses, one per person, each with the job that decides what reaches them. Everybody gets an invitation email.	Patricia
Switch the login to live	Removes the <i>Development mode</i> badge and puts sign-in on its final settings.	Monkay Web
Confirm the durations and prices	Each service carries its own submission window, processing time and fee, taken from the brochure. Worth reading once before the first real sheet.	Patricia
Confirm the letters	The eight emails in section 6 go out in the practice's name. Change any wording you would not have written yourself.	Patricia
Decide who loads payments	Taskey allows management and the office. Anybody else can read a sheet but cannot open one.	Patricia

What is already done

- The workflow, the dates and the routing, all from the practice's own chart and brochure.
- Live database, backed up by the host, with nothing kept on anybody's laptop.
- Sign-in by invitation only, with no password to lose.
- Email on a verified domain, with every send recorded, successes and failures both.
- The 07:00 run each working day: standing duties raised, clients chased, one list emailed per person.
- A record of every action that cannot be edited by anybody, including us.

Taskey for Pharmers. Built by Monkay Web. Questions about anything in this document go to Tristan, and anything about how the practice should work goes to Patricia. The screens here were photographed on 10 September 2026 and the system moves on, so treat the layout as current and the client names as fiction.
